

Programme brief

Version 3 (staging draft) · 23 September 2026

NWPharmaTech presents our research programme for people at clinical high risk of psychosis, explaining the clinical need, the science and the people behind it.

The programme centres on **NWPT-SM32300**, an investigational oral cannabidiol formulation, and a planned **Phase 2B study** evaluating dose response, symptoms, safety and tolerability. The website brings together accessible explanations, supporting evidence and programme updates, clearly distinguishing established findings from questions our research aims to answer.

Alongside the clinical programme, we are developing a financing route through which eligible investors, including those in the crypto and mental-health communities, could participate through a dedicated programme vehicle, potentially using permissioned tokens. Our ambition is to connect rigorous pharmaceutical development with transparent communication and broader access to research financing, while keeping clinical decisions independent and recognising that the treatment's effectiveness remains unproven.

Investigational medicine. NWPT-SM32300 is investigational; not approved by any medicines regulator for any use. Its effectiveness is unproven. This brief is not medical advice and is not an offer of any security or token.

Where the programme stands

Investigational medicine	300 mg oral softgel capsule; highly purified cannabidiol in a self-emulsifying (micellar) lipid formulation; GMP manufacture
Completed	Phase 1 study: 14 healthy adult volunteers aged 18 to 55; randomised, open-label, three-period crossover; single oral doses of NWPT-SM32300 600 mg and 900 mg, and the licensed cannabidiol oral solution Epidyolex as comparator. Completed 10 December 2025; database locked 11 March 2026. Registered as NCT07186283 and ISRCTN25163383. Results not yet published.
Current stage	Phase 2B study in people at clinical high risk of psychosis: Planned. Not recruiting. Protocol being finalised.
Next milestone	Finalise the Phase 2B protocol, then submit for regulatory and research ethics review. No date set.
Financing	In development: platform-integrated programme financing through a dedicated vehicle, with permissioned tokens at closing where feasible and register-first as the fallback. No investment is being accepted.
Sponsor	NWPharmaTech Ltd, company number 13572461, England and Wales

What is established, and what is not

- **Established:** in pooled studies, about one in four people at clinical high risk developed psychosis within three years; no medicine is licensed for this group; NICE advises against antipsychotics for prevention.
- **Emerging:** small, short studies of other CBD preparations in schizophrenia (mixed results) and in clinical high risk (brain activity, stress response, and one 21-day symptom study).
- **Open:** whether NWPT-SM32300 reduces symptoms, which dose is best, and its safety and tolerability in this population.
