

Discussion brief — prepared from selected NWPT public information

Prepared on 26 September 2026 · Content version ww-1 · Public information reviewed 26 September 2026 · <https://www.nwpharmatech.org/work-with-us>

Text marked “NWPharmaTech public information” is quoted from the NWPharmaTech website. Text marked “Visitor question” was written by the person who prepared this brief. This brief is not a protocol, an offer or an agreement. It does not indicate an approved protocol, available study medicine, sponsorship, funding, or access to unpublished data.

VISITOR'S FOCUS

What is your research objective?	Clinical outcomes in people at clinical high risk
Which population interests you?	People at clinical high risk of psychosis
Where are you in your planning?	Developing a proposal

1. Discuss this finding

NWPHARMATECH PUBLIC INFORMATION · FINDING · WORK STATUS: BACKGROUND · CLINICAL NEED AND EXISTING EVIDENCE

An updated meta-analysis estimated that about one in four people identified as CHR-P (pooled estimate, 25%) developed psychosis within three years. [1]

VISITOR QUESTION

Were the pooled and Kaplan–Meier estimates drawn from the same services?

2. Clarify this limitation

NWPHARMATECH PUBLIC INFORMATION · LIMITATION · WORK STATUS: COMPLETED · THE PHASE 1 STUDY

Study activity ended on 10 December 2025. Results have not yet been published. [2, 3]

VISITOR QUESTION

When are the Phase 1 results expected to be published?

3. Discuss this finding

NWPHARMATECH PUBLIC INFORMATION · FINDING · WORK STATUS: PROPOSED · THE PLANNED PHASE 2B STUDY

If it goes ahead: whether NWPT-SM32300 shows a dose response, changes symptoms, and is safe and tolerable in people at clinical high risk of psychosis. [4]

VISITOR QUESTION

No question added.

4. Ask about collaboration

TOPIC: EXPLORING A COLLABORATION

VISITOR QUESTION

How does my research question relate to the aims of the planned Phase 2B study?
